DETAILED ACTION

This action is in response to the amendment filed on 3/14/2007.

Allowable Subject Matter

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1-9 are allowable over the prior art of record including closest US Patents by Kamiko (US 4653856), Lee (US 6034940), and Ito (US 6983472), considered individually or in combination fail to disclose or fairly teach an optical pickup including a radiating plate as claimed including the combination wherein slits are formed in the radiating plate to form a pair of tongues arranging an axis of the engaging hole there-between; and screw inserting portions are formed in the respective tongues to communicate with the slits.

Kamiko discloses a leaf spring for holding a laser light source wherein the leaf spring includes slits forming tongues and screw holes formed in the tongues. However, Kamiko does not disclose that the leaf spring is a radiating plate since a leaf spring is used to support the light source during focus and tracking operations.

Lee discloses a radiating plate with a pair of tongues which include screw inserting portions, but fails to disclose wherein slits are formed to create the pair of tongues (301, fig. 3).

Ito discloses providing a supporting base plate for dissipating heat (8, fig. 3) but fails to disclose providing slits and tongues for the screw inserting portions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
